

Multi-site, multi-user, multi-group two way radio

**Based on an existing protocol SHOWstream is a unique service of two-way radio designed to eliminate all the frustrations associated with conventional communications.**

Tailored to suit the demanding requirements of today's live events, the heart of a SHOWstream system is a controller managing a database of radio users. The system has a number of radio bases, plus radios (each with a group number and an individual three digit number), enabling the controller to pinpoint the whereabouts of each radio on the site. It can also identify each radio's condition – whether in call mode, unavailable or idle.

## Specifications

### Applications:

- Exhibitions
- Trade fairs
- Meetings
- Conventions
- Conferences
- Technical training seminars
- Public meetings
- Televised events
- Sporting events
- Temporary structure/site builds

### User benefits:

- One-to-one calls with complete privacy
- One-to-many calls
- Many-to-many calls
- Make and receive calls to and from the telephone network, hotel switchboards and GSM
- Send and receive predefined text messages
- Virtually unlimited user groups
- No user intervention required, channel changing
- Call divert – divert your calls when you cannot be disturbed
- Accessories – quality covert accessories, as well as a range of carrying options

### Organiser benefits:

- No call costs between SHOWstream radios – know your budget in advance
- *Privacy* – clients and vendors sharing a radio system without being able to eavesdrop on each other
- *Security* – the ability to be able to bar certain types of calls from certain users
- *Reliability* – the radio system is a private network, with no problems of channel congestion and competing for access on a public network at peak times

### Features:

- As well as the simplicity aspect of the system, the user has access to a great number of enhancements that just aren't available with conventional radio systems, such as:
- *Flexibility* – individual handsets can be members of more than one user group (channel), which allows the user type (e.g. dept heads; specific trades) to be laid out logically
- *Comfort* – 'radio fatigue' is eliminated as calls are targeted, allowing individuals to receive calls only meant for them and filtering out irrelevant ones
- *Speed* – the dynamic allocation of resources allows users to place a call without having to wait for others to clear down. Instant feedback with a display on the radio showing who is calling, whilst when placing a call it tells you if the called party is busy or unobtainable
- *Information* – the handset display shows battery strength and radio coverage
- *Continuity* – if a handset is lost or broken a new one on the same number can be instantly issued
